Application # 10/711 662
Bridge Converting movement into Electrical Energy.

Date: 25 June 2006

To: Raymond Addie, Patent Examiner, USPTO, Commissioner for Patents, PO Box
1450, Alexandria, Virginia, 22313-1450, fax 571-273-8300

Reference: Amendment following the Petition to revive pursuant to 37 CFR 1.137
b)

Mr. Addie,

This is the amendment that follows the petition to revive pursuant to 37 CFR 1.137 b).

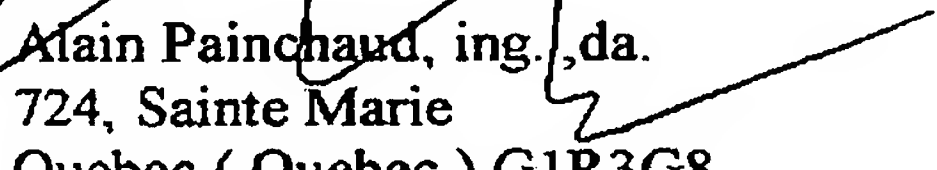

So, the amendment is to the technical text and could have been inferred by reading what has been originally deposited:

My invention is different and innovative because it is composed of moving road segments, to be considered as pistons, mechanically coupled together and parallel to the traffic direction.

It could easily be inferred that the bridge creates a travelling wave when a vehicle passes on it. This is completely new and not part of any other art known as of today.

With respects to the claims, I reiterate that it is completely new and I see no reasons to make any change(s) with what I added above.

Best Regards,

Alain Painchaud, ing., da.
